Abstract. Many people think of the skeletal structure as static, but as our ribs show, they are some of the most dynamic structures in our bodies.

The Amazing Regenerating Rib | Answers in Genesis

A bone scan helps find cancer that has started in or spread to the bones. It can also help monitor how well treatment is working for cancer in the bone. How does a bone scan work? A bone scan is a nuclear medicine test. This means that the procedure uses a very small amount of a radioactive substance, called a tracer. The tracer is injected into a vein.
