Preface What follows are my lecture notes for a first course in differential equations, taught at the Hong Kong University of Science and Technology.

Introduction to Differential Equations

Definition. Given a simply connected and open subset D of \mathbb{R}^2 and two functions I and J which are continuous on D then an implicit first-order ordinary differential equation of the form $M(x, y) + N(x, y)y' = 0$, is called an exact differential equation if there exists a continuously differentiable function F , called the potential function, so that $F_x = M$ and $F_y = N$. The nomenclature of "exact ...

A differential equation can be homogeneous in either of two respects.. A first order differential equation is said to be homogeneous if it may be written $M(x, y) + N(x, y)y' = 0$, where f and g are homogeneous functions of the same degree of x and y . In this case, the change of variable $y = ux$ leads to an equation of the form $M(u, 1) + N(u, 1)u' = 0$, which is easy to solve by integration of the two members.

Are you interested in eigenvalues and eigenvectors in a finite dimensional linear algebra sense? Or are infinite dimensional concepts acceptable? If so, the solutions of partial differential equations (e.g., the physics of Maxwell's equations or Schrodinger's equations, etc.) are often thought of as superpositions of eigenvectors in the appropriate function space.

Una ecuación diferencial es una ecuación matemática que relaciona una función con sus derivadas. En las matemáticas aplicadas, las funciones usualmente representan cantidades físicas, las derivadas representan sus razones de cambio, y la ecuación define la relación entre ellas. Como estas relaciones son muy comunes, las ecuaciones diferenciales juegan un rol primordial en diversas ...

In matematica, un'equazione differenziale lineare è un'equazione differenziale, ordinaria o alle derivate parziali, tale che combinazioni lineari delle sue soluzioni possono essere usate per ottenere altre soluzioni.
