In thermodynamics, an isentropic process is an idealized thermodynamic process that is both adiabatic and reversible. The work transfers of the system are frictionless, and there is no transfer of heat or matter. Such an idealized process is useful in engineering as a model of and basis of comparison for real processes. The word "isentropic" is occasionally, though not customarily, interpreted ...

For a quick reference table of these equations, see: Table of thermodynamic equations Thermodynamics is expressed by a mathematical framework of thermodynamic equations which relate various thermodynamic quantities and physical properties measured in a laboratory or production process. Thermodynamics is based on a fundamental set of postulates, that became the laws of thermodynamics.

Uno de los criterios que se suele utilizar en termodinámica para evaluar el sentido de los intercambios de energía entre un sistema y su entorno, en forma de calor y trabajo. Dicho criterio según la IUPAC (International Union of Pure and Applied Chemistry) es el siguiente: . Positivo (+), para el trabajo y el calor que entran al sistema e incrementan la energía interna.
