1 Section 1.1: What is Deterministic Operations Research? Operations Research is the study of how to form mathematical models of complex science, engineering, industrial, and management problems and how to analyze them using mathematical techniques.

we often provide a general model (without the data values) as opposed to a specific instance. 2.1 Let  $U_T, U_C$  denote the number of unfinished tables and chairs made,  $F_T, F_C$  be the number of finished tables and chairs made, and  $W$  be the amount of wood purchased.

According to the Operations Research Society of America, "Operations research is concerned with scientifically deciding how to best design and operate man-machine systems, usually under conditions requiring the allocation of scarce resources." This publication is the first in a series describing operations research (OR) techniques that can help forest products managers solve complex problems.

This website supports the book Deterministic Operations Research: Models and Methods in Linear Optimization by David J. Rader, Jr. Soon you will be able to find solutions to sample problems, Matlab and Maple files supporting the examples in the text, links to optimization software packages that can be used with the text, and other features useful to both the instructor and their students.

These notes will serve as an introduction to the basics of solving deterministic models in operations research. Topics discussed will include optimization techniques and applications in linear programming. Specifically a discussion of sensitivity analysis, duality, and the simplex method will be given.
