The dimension of a vector space is the number of vectors in any basis for the space, i.e. the number of coordinates necessary to specify any vector. This notion of dimension (the cardinality of a basis) is often referred to as the Hamel dimension or algebraic dimension to distinguish it from other notions of dimension.. For the non-free case, this generalizes to the notion of the length of a ...

Infinity (symbol:  $\infty$ ) is a concept describing something without any bound, or something larger than any natural number. Philosophers have speculated about the nature of the infinite, for example Zeno of Elea, who proposed many paradoxes involving infinity, and Eudoxus of Cnidus, who used the idea of infinitely small quantities in his method of exhaustion.

2.2. Method I: Vector Optimisation. The vector optimisation is a multi-objective optimisation approach that implies the independent treatment of the different objectives (Marler and Arora, 2004). Within this article, it refers to the independent optimisation of an environmental and economic indicator to identify Pareto-optimal solutions.
