already discussed a geometric figure, namely, a line. Another important example of a geometric figure is the concept of an angle. By an angle we mean the opening between two line segments that have a common endpoint, known as the vertex, as shown in Figure 37.3(a). The line segments are called the sides of the angle.

2003), varied exposure to geometric shapes of different types, their labels, and comparisons between shapes in the same and different categories is likely necessary to begin extending shape names beyond perceptually based matches (e.g., Gentner & Namy, 1999; Graham, Namy, Gentner, & Meagher, 2010; Namy & Gentner, 2002).
