perturbative QCD, let alone the whole of QCD, in these lectures. Excellent reviews of the current status of QCD can be found in many lectures in recent CERN schools [8-12]. We will begin by reviewing the quark model and how colour was proposed as the solution of the Fermi-Dirac statistics problem.

1.2 Gluons and Quantum Chromodynamics Quarks do not interact with each other directly; they do so through intermediate agents called gluons. A simple way to understand this is that the gluons in strong interactions play the role of photons in quantum electrodynamics (QED), which mediate electromagnetic interactions between charged currents.
