Essential in the physics of these low dimensional systems is their density of states. The latter is the number of available electron states per unit energy. Let us ... field of low dimensional semiconductor structures. The resonant tunnelling bipolar transistor was proposed by Capasso and Kieh15 in 1984.

Physics of Low-Dimensional Semiconductor Structures

The physics of low dimensional semiconductor structures, including heterostructures, superlattices, quantum wells, wires and dots is reviewed and their modeling is discussed in detail. The truly exceptional material, Graphene, is reviewed; its functionalization and Van der Waals interactions are included here.
