a part of graph theory which actually deals with graphical drawing and presentation of graphs, briefly touched in Chapter 6, where also simple algorithms are given for planarity testing and drawing.

4. Graph (a) $y = 1/x$. (b) $y = \sin x$. What are the x-intercepts of this graph? (I.e., where does the graph cross the x-axis? A related question is: What are the zeros of the function $y = \sin x$?) (c) $y = \sin 1/x$. What are the x-intercepts of this graph? What is the domain of $\sin 1/x$? 5. True or false? Between every two distinct rational numbers there is a rational number.

Learning Math with Graphing Calculator 1 Introduction Graphing Calculator is a graphing program. It graphs functions and relations, implicit and explicit, parametric and "straight," in two and three dimensions. It knows a wide array of mathematical functions already, including all the trig functions.

Application of Graph Theory in Computer Science and

Mathematics with Applications in the Management, Natural, and Social Sciences presents sound mathematics in an understandable manner, proceeding from the familiar to new material and from concrete examples to general rules and formulas.

Mathematics with Applications In the Management, Natural

Applications of Graph theory: Graph theoretical concepts are widely used to study and model various applications, in different areas. They include, study of molecules, construction of bonds in chemistry and the study of atoms.
