Image = object  $\hat{S}$ — Point Spread Function + noise The noise is an important consideration since it limits the usefulness of deconvolution procedures aimed at reversing the blurring effects of the image measurement.

Image-intensifier-based systems are also widely used for radiographic imaging and for simulation in radiation therapy planning (radiographic and fluoroscopic) (Williams and Thwaites 2000). The image intensifier systems are very bulky and research to replace these detectors by much more practicable devices is in progress.

### **Inorganic scintillators in medical imaging**

Now in its fourth edition, this text provides the reader with the tools necessary to be comfortable with the physical principles, equipment, and procedures used in diagnostic imaging, as well as appreciate the capabilities and limitations of the technologies.
