A hidden ferromagnetic insulating state with a high Curie temperature is found by Ho Nyung Lee and coworkers in epitaxial double perovskite films, as described in article number 1805389. Such an intriguing state is rare in nature but critical for realizing quantum electronic and computing devices without dissipating electric power.

Technologies Gyricon. Electronic paper was first developed in the 1970s by Nick Sheridan at Xerox's Palo Alto Research Center. The first electronic paper, called Gyricon, consisted of polyethylene spheres between 75 and 106 micrometers across. Each sphere is a janus particle composed of negatively charged black plastic on one side and positively charged white plastic on the other (each bead is ...

Semiconductors are defined by their unique electric conductive behavior, somewhere between that of a conductor and an insulator. The differences between these materials can be understood in terms of the quantum states for electrons, each of which may contain zero or one electron (by the Pauli exclusion principle). These states are associated with the electronic band structure of the material.
