Protocols for Surveying and Evaluating Impacts to Special

Spring surveys, in combination with hunter harvest statistics, provide evidence that the ruffed grouse population cycles at approximately 10-year intervals. The first surveys of ruffed grouse in Minnesota occurred in the mid-1930s, and the first spring survey routes were established along roadsides in 1949.

SUMMARY OF FINDINGS - Minnesota Department of Natural

The world's population growth rate peaked in the late 1960s at just over 2 percent per year (2.5 percent in developing countries). Demographers currently project that Earth's population will reach just over nine billion by 2050, with virtually all growth occurring in developing countries (Fig.

Reptiles. August 2011 Survey Protocol (PDF) for the Barefoot Banded Gecko (California Department of Fish and Game, 2011). May 2004 updated version of the Blunt-nosed Leopard Lizard Survey Protocol (PDF) (California Department of Fish and Game, 2004).

Survey and Monitoring Protocols and Guidelines

Effects of Population Growth and Urbanization in the Pacific Islands More than 35 percent of the people of the Pacific islands live and work in towns, and the rate of urban population growth throughout most of the region is high (figure 1). Overall, eight of the twenty-two Pacific countries are now predominantly urban; by 2020 more than half

Chapter 1 Effects of Population Growth and Urbanization in

torical lack of standardization of survey and population monitoring meth-ods, such that one cannot reliably compare reports among different stud-ies. This handbook outlines standardized methods for gopher tortoise surveys. A critical first step in determining an appropriate survey methodology is to identify the specific objective(s) of the project.
