We propose and study the SABR/LMM model. This is a term structure model of interest rates with stochastic volatility that is a natural extension of both the LIBOR market model and the SABR model. The key result of the paper is a closed form asymptotic formula for swaption volatility in the SABR/LMM model which allows

Abstract: SABR models have been used to incorporate stochastic volatility to LIBOR market models (LMM) in order to describe interest rate dynamics and price interest rate derivatives. From the numerical point of view, the pricing of derivatives with SABR/LIBOR market models (SABR/LMMs) is mainly carried out with Monte Carlo simulation.

SABR/LIBOR market model to the market, before the sensitivity calculations can be performed. The adjoint method for calculating sensitivities is described in article [6] for the LIBOR market model. We will try to apply this method to the SABR/LIBOR market model and hope that it will create more market-oriented sensitivities.

Libor market model p. 3. Dynamics of LMM. We consider a sequence of approximately equally spaced dates  $0 \leq T_0 < T_1 < \dots < T_N$ , which are called the standard tenors. A standard Libor forward rate  $L_j$ ,  $j = 0, 1, \dots, N-1$ , is associated with a forward rate agreement which starts on  $T_j$  and ends on  $T_{j+1}$ .

SABR LIBOR Market Model. As some of the complex products, such as range accruals or ratchets, depend on several strikes per expiry, we realize that these models suffer from an important shortcoming they can only be calibrated to one strike per expiry and therefore cannot model the volatility smile characterizing today's markets.

The SABR LIBOR-Market Model. An important flaw of the LMM is known as sticky volatilities: if the model is calibrated in a highly volatile market it assumes that this high volatility lasts forever, which leads to inaccurate results. The SABR LMM attempts to address this issue. In this model, each LIBOR rate is assumed to follow...
