Flash memory is an electronic (solid-state) non-volatile computer storage medium that can be electrically erased and reprogrammed.. Toshiba developed flash memory from EEPROM (electrically erasable programmable read-only memory) in the early 1980s and introduced it to the market in 1984. [citation needed] The two main types of flash memory are named after the NAND and NOR logic gates.

A constant current source source can supply a fixed current to a load regardless of input voltage or load change. LM317 / LM350 / LM338 constant current source is one of the simplest design.

A crystal oscillator is an electronic oscillator circuit that uses the mechanical resonance of a vibrating crystal of piezoelectric material to create an electrical signal with a precise frequency. This frequency is often used to keep track of time, as in quartz wristwatches, to provide a stable clock signal for digital integrated circuits, and to stabilize frequencies for radio transmitters ...

Powerful microtransmitter that can cover 3km range. To amplify the signal, a 2N3866A transistor is used that can provide up to 1W with gain > 10dB (24Volt).

An In-Home, IoT Solution for Early Dementia Detection. The number of people with dementia is projected to double by 2030. To address this issue, researchers have developed an IoT health monitoring system to

identify signs of Mild Cognitive Impairment.
