Membrane technology covers all engineering approaches for the transport of substances between two fractions with the help of permeable membranes. In general, mechanical separation processes for separating gaseous or liquid streams use membrane technology.

An air separation plant separates atmospheric air into its primary components, typically nitrogen and oxygen, and sometimes also argon and other rare inert gases.. The most common method for air separation is fractional distillation. Cryogenic air separation units (ASUs) are built to provide nitrogen or oxygen and often co-produce argon.

Industrial Gases Production, Equipment Supply and Services. Universal Industrial Gases (UIG) is a designer, manufacturer, supplier, installer and operator of industrial gases production and supply systems. Its product portfolio includes air separation plants, cryogenic oxygen plants, cryogenic nitrogen plants, liquefiers, and compressed dry air systems.

Polymeric gas-separation membranes were commercialized 30 years ago. The interest on these systems is increasing because of the simplicity of concept and low-energy consumption. In the refinery, gas separation is needed in many processes such as natural gas treatment, carbon dioxide capture, hydrogen purification, and hydrocarbons separations.

1. Introduction. Maritime transport of goods is a relatively clean form of transportation per kilogram of material, and it is therefore currently gaining relative weight with respect to air and road transport (Micco and PÃ©rez, 2001, Grewal and Haugstetter, 2007). This form of transportation has also been increasing (and will most likely continue to do so in the future) due to the globalization ...

6.1 Overview of Air Transportation Air transport is an important component of Canada's overall transportation mix, with local, regional, national and international airlines flying passengers and cargo to destinations across the country and around the world.
